

**ENGINEER'S CERTIFICATION
CONVERSION OF EXISTING CESSPOOL TO SEEPAGE PIT**

Property Owner: _____

Property Address: _____

Property Tax Map Key Number: _____

As the design engineer responsible for the individual wastewater system design serving the above property, I attest to the fact that the following information has been investigated and is true:

1. A search of the Department of Health's records maintained in the Sanitation Branch (District Health Office on neighbor islands) does not indicate that any enforcement order, informal enforcement order, notice or correspondence has been issued to the above property owner due to cesspool overflows.
2. A search of the City and County of Honolulu's, County of Maui's or County of Hawaii's cesspool pumping records indicate that the existing cesspool(s) has not been pumped more than once within the last 12 months.

or

In lieu of County records, a search of the Department's records and those of private cesspool pumpers indicates that the existing cesspool(s) has not been pumped more than once within the last 12 months.

3. I or an agent of mine has inspected the existing cesspool and determined that it is functional and capable of disposing the design flow anticipated from the project. At the time of inspection, there was a total of _____ feet from the ground surface to the liquid level in the cesspool. The Site Evaluation/Percolation Test form has been completed and signed and is attached.
